

Vishesh Kumar *Senior Backend Engineer(Node js)*

✉ visheshmzn99@gmail.com ☎ 8954161886 in visheshkumar99 github leetcode

PROFESSIONAL SUMMARY

Senior Backend Engineer with 4+ years of experience building **high-scale distributed systems** using Node js, Kafka, Redis, and AWS. Proven track record of designing **event-driven architectures**, **processing millions of transactions daily**, and improving system latency by up to 60%. Experienced in **leading** backend development, driving system design (HLD/LLD), and ensuring production reliability at scale.

WORK EXPERIENCE

Member Technical Staff – II (Backend), SMC Global Securities Limited (Mar 2023 - present) DELHI INDIA

- Led a team of **4 engineers**, driving **development**, **task planning**, and delivery of high-throughput distributed systems.
- Owned critical backend systems processing **millions of financial transactions daily**, ensuring scalability, reliability.
- Designed and scaled event-driven pipelines using Node js, Kafka, **Redis**, **processing millions of financial records** daily with high reliability.
- Designed and built a **real-time stock broadcasting system delivering low-latency market data** at scale using WebSockets.
- Improved system performance (**~30% latency reduction**, **~55% availability gain**) via caching and optimizations.
- Ensured **~99% availability** through fault-tolerant design and AWS Auto Scaling.

Full Stack Developer (Contract), Indian Railway & Laxmi Industrial Corporation (Oct 2022 - Mar 2023) Meerut(U.P) INDIA

- Owned and delivered a **real-time train telemetry system** capturing speed, vibration, and GPS data.
- Designed **Kafka-based ingestion + WebSocket streaming**, supporting **50+ concurrent train runs**.
- Enabled **predictive maintenance and safety analytics** via low-latency processing.

Software Developer, Synapsica Healthcare Limited (May 2022 - Oct 2022) Bangalore,INDIA

- Designed and built a **scalable multi-channel notification system**
- Achieved **~99% availability** with retries, fault tolerance, and monitoring.

Full Stack Developer, DLT LABS (Nov 2021 - Apr 2022) Noida, INDIA

- Contributed to **backend APIs and internal tools** for enterprise-grade applications.
- Delivered features, bug fixes, and performance improvements across services.

SKILLS

Programming: JavaScript, TypeScript, Golang, Python

Backend & APIs: Node js, REST APIs, GraphQL, gRPC, WebSockets

Databases: PostgreSQL, MongoDB, SQL Server, Redis

SYSTEM DESIGN: Microservices, Event-Driven Architecture, Distributed Systems, High Availability, Scalability

Messaging & Streaming: Kafka, RabbitMQ, SQS

Cloud & DevOps: AWS (EC2, S3, Cloud Front, ECS, Auto Scaling, CloudWatch), Docker, Kubernetes, CI/CD

Other: Caching, Performance Optimization, Fault Tolerance, Monitoring & Observability

EDUCATION

B.Tech, Ajay Kumar Garg Engineering College (Jul 2017 - Jul 2021)

Computer Science and Engineering

PROJECTS

Market Mojo – Data Ingestion & Analytics Platform

- Designed a **Kafka-based ETL pipeline** processing **millions (50M+)** of records with **holdings calculation & analytics**.
- Built **scheduled data workflows**, reducing dependency on legacy systems.

- Improved performance by **40–60%** via optimized storage and processing.

SMCTradeOnline – Real-Time Stock Broadcasting

- Built **low-latency broadcasting system** using WebSockets + Redis for market data delivery.
- Scaled to **high-concurrency users** with efficient data distribution and caching.

OMS, Indian Railway OSM Project (Node js, Electron, React JS, WebSocket)

- Owned and delivered a **real-time telemetry + streaming system** capturing train data (speed, vibration, GPS).
- Built **scalable ingestion and streaming pipelines (Kafka, WebSocket)** supporting 50+ concurrent trains.
- Enabled **predictive maintenance and safety analytics** through low-latency processing.

Multi-Channel Notification System, (Node js, Mongo DB, Kafka, Rabbit MQ)

- Designed and implemented **event-driven notification platform** using Kafka, Rabbit MQ, Redis, and Golang.
- Achieved **~99% delivery reliability** with retries, fault tolerance, and monitoring.

CERTIFICATES & ACHIEVEMENTS

- Ultimate AWS Certified Solutions Architect Associate 2026

- Software Architecture & Technology of Large-Scale Systems
